

EXPERIMENT 8

ROLL NO: 240601376

NAME: Paarthiv Suriya Sundaram Nagarajan

AIM

To design a storyboard representing the user interaction and flow of an application using low-fidelity wireframes.

OBJECTIVE

- To understand user behavior and interaction
- To visualize real-life usage of an application
- To create low-fidelity storyboard using wireframes

TOOLS USED

- Balsamiq (Wireframing Tool)

THEORY

A storyboard is a visual representation of how a user interacts with an application in a real-life scenario. It shows the sequence of actions, screens, and user responses.

In this experiment, a low-fidelity storyboard is created using Balsamiq, where multiple screens are arranged in a single layout to represent the application flow.

PROCEDURE

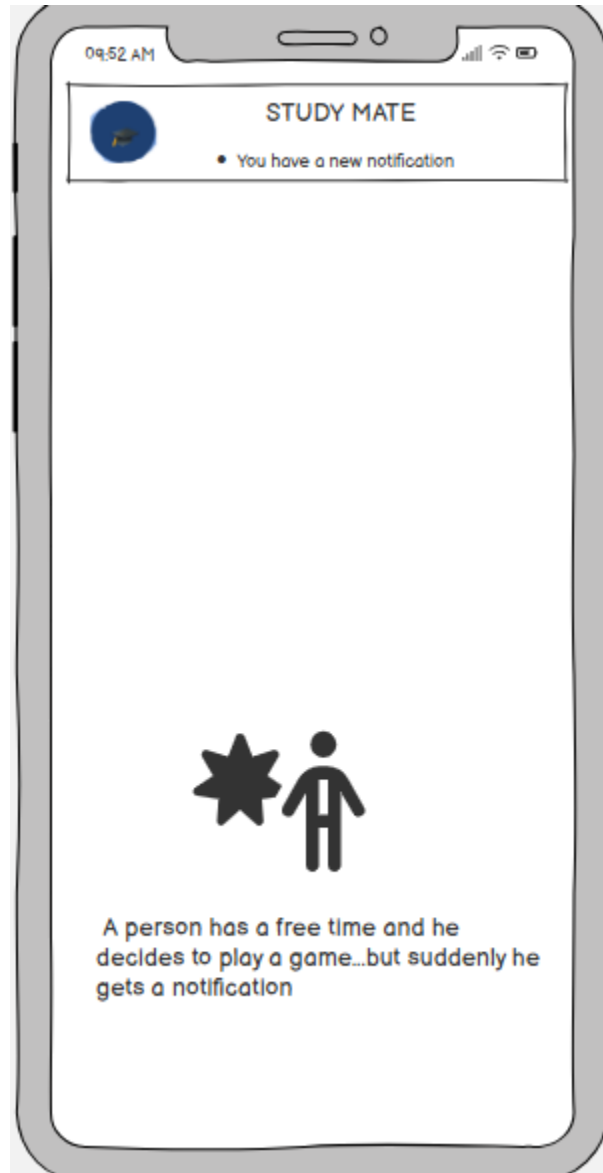

1. Opened Balsamiq and created a new project
2. Added multiple mobile frames in a single screen
3. Designed storyboard based on a real-life scenario
4. Used basic shapes, text, and icons to represent user actions
5. Created the following screens:
 - Notification / Initial screen
 - Splash screen
 - Dashboard screen
 - Profile screen
6. Added short descriptions to explain user thoughts and actions
7. Maintained low-fidelity (sketch-style) design

STORYBOARD DESCRIPTION

The storyboard represents a real-life scenario of a student using the StudyMate app:

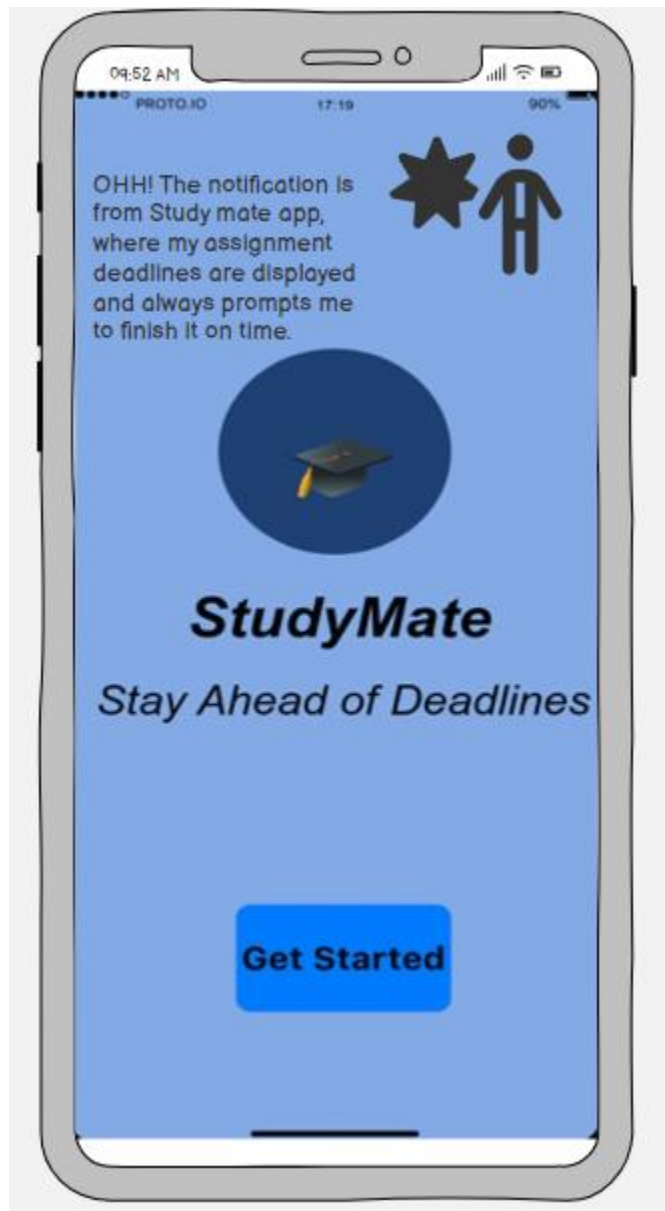

□ Screen 1 – Notification Scene

- User is free and planning to play a game
- Suddenly receives a notification from the app
- Indicates new assignment alert

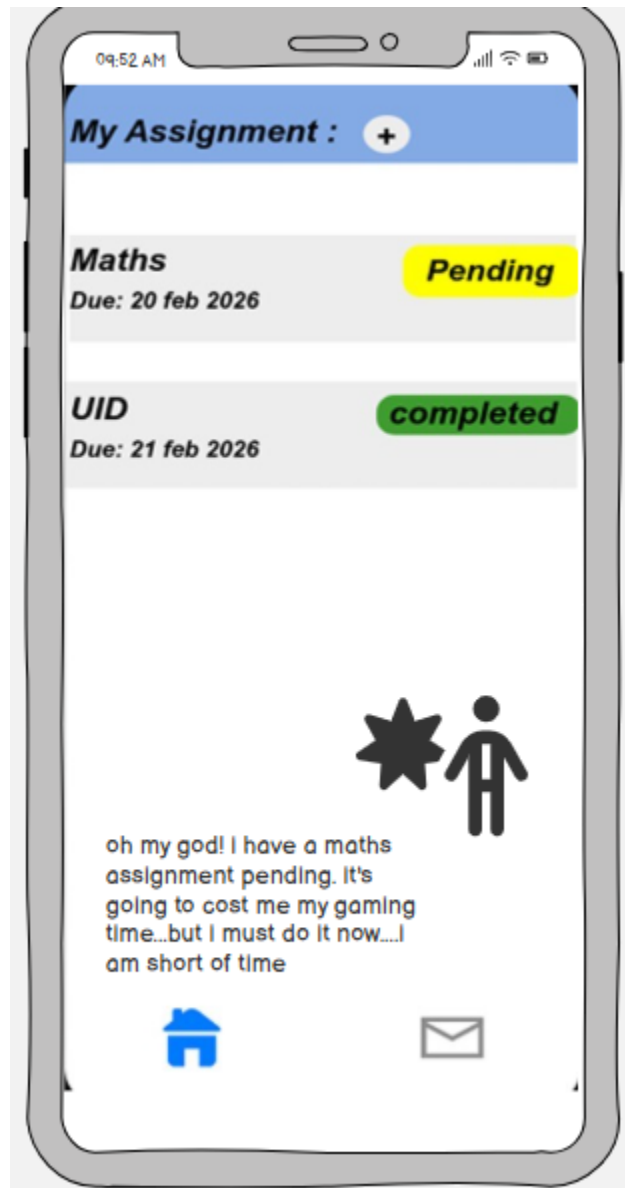

□ Screen 2 – Splash Screen

- Displays StudyMate app interface
- Shows tagline and app purpose
- User understands that app helps track deadlines

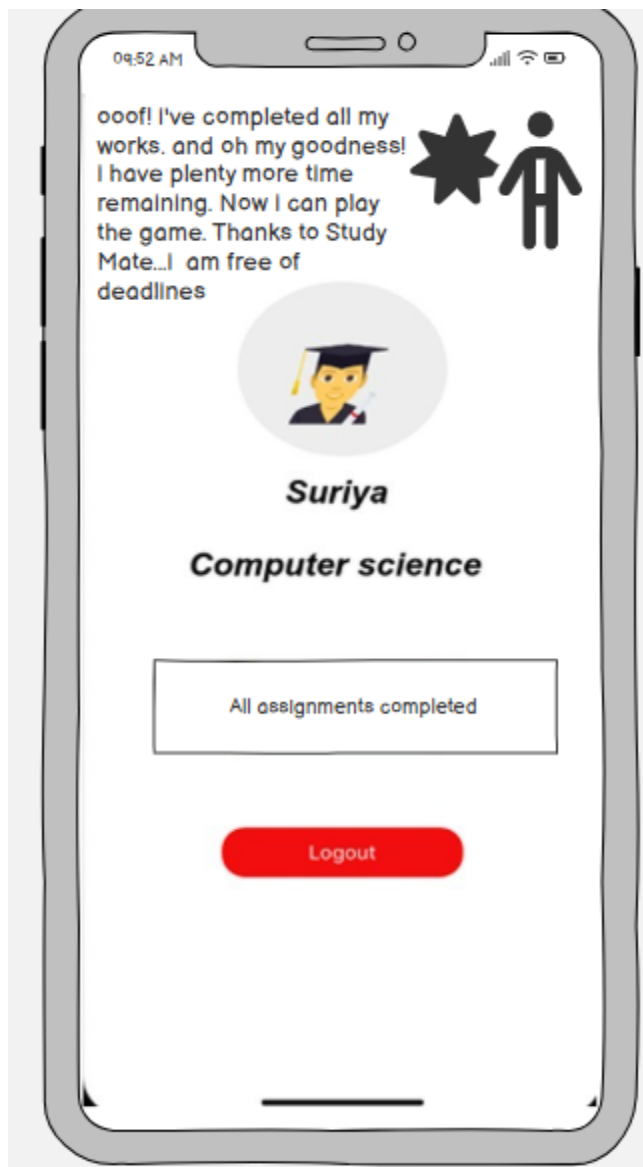

□ Screen 3 – Dashboard Screen

- Shows list of assignments
- One assignment is pending
- User realizes urgency and decides to complete work

□ Screen 4 – Profile / Completion Screen

- Shows user details
- Indicates all assignments completed
- User feels relieved and free from deadlines

USER FLOW

Notification → Open App → View Assignments → Complete Tasks → Profile → Logout

RESULT

Thus, the storyboard representing the real-life user interaction and flow of the StudyMate application was successfully created using Balsamiq.
