

Experiment 5

Name: Paarthiv Suriya Sundaram Nagarajan

Roll No: 240701376

Conduct task analysis for an application and document user flows. Create corresponding wireframes using Lucidchart.

OBJECTIVE

- To understand user interaction with the app
- To design clear user flow
- To create wireframes (low-fidelity prototypes)
- To improve usability and navigation

TOOLS USED

- Lucidchart (Wireframing & Flow Diagram Tool)

THEORY

Task analysis is the process of identifying how a user interacts with an application to complete a task.

User flow represents the step-by-step journey of a user inside the application.

Wireframes are low-fidelity designs used to visualize layout and structure before development.

APP NAME

StudyMate – Assignment Management App

TASK ANALYSIS

Main Tasks Identified:

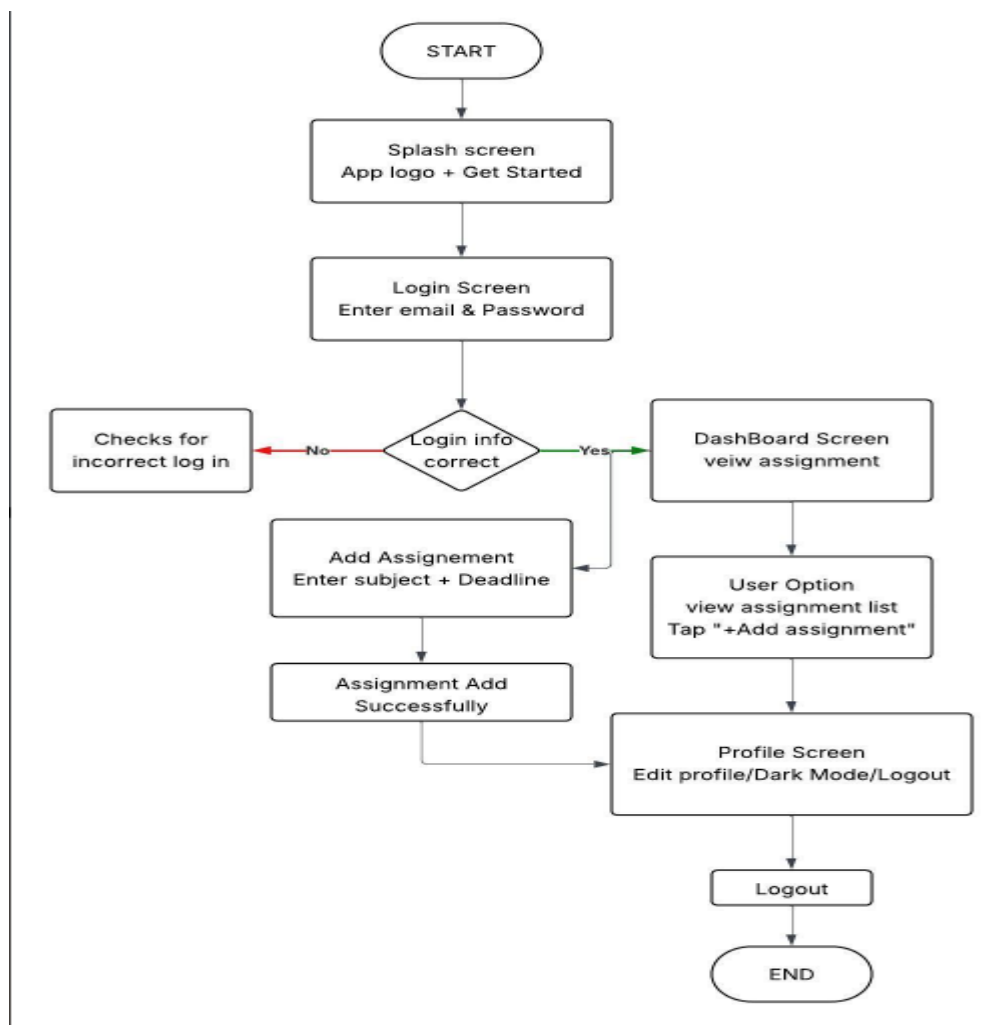

1. Open the application
2. Login using email and password
3. View assignments
4. Add new assignment
5. Check assignment status
6. View profile
7. Logout

USER FLOW DESCRIPTION

The flow of the application is as follows:

1. User opens the app (Splash Screen)
2. User navigates to Login Screen
3. User enters login credentials
4. System checks login validity
 - If incorrect → shows error
 - If correct → goes to Dashboard
5. User views assignments
6. User can add a new assignment
7. Assignment is added successfully
8. User navigates to Profile screen
9. User can logout
10. Application ends

FLOW DIAGRAM

WIREFRAME DESIGN (LOW-FIDELITY)

The following wireframes were designed:

1. Splash Screen

- App logo
- App name (StudyMate)
- Get Started button

2. Login Screen

- Email input
- Password input
- Login button

3. Dashboard Screen

- Assignment list
- Status (Pending/Completed)
- Add Assignment option

4. Add Assignment Screen

- Subject input
- Deadline input
- Submit button

5. Profile Screen

- User details
- Edit profile option
- Logout button
